Methods.-- The hygroscopic moisture was determined by drying in the water-oven for 2 hours at 980 C. Since the zinc salts were charred by this treatment, their dry substance was calculated on the same basis as the magnesium salts. The total H<sub>2</sub>SO<sub>4</sub> was determined after destruction of the cellulose by aqua regia, by precipitation as barium sulphate. The acetic acid was determined by neutralising the products with caustic soda in presence of phenol-phthalein, and then saponifying by a known excess of caustic soda in presence of 60 p.ct.
